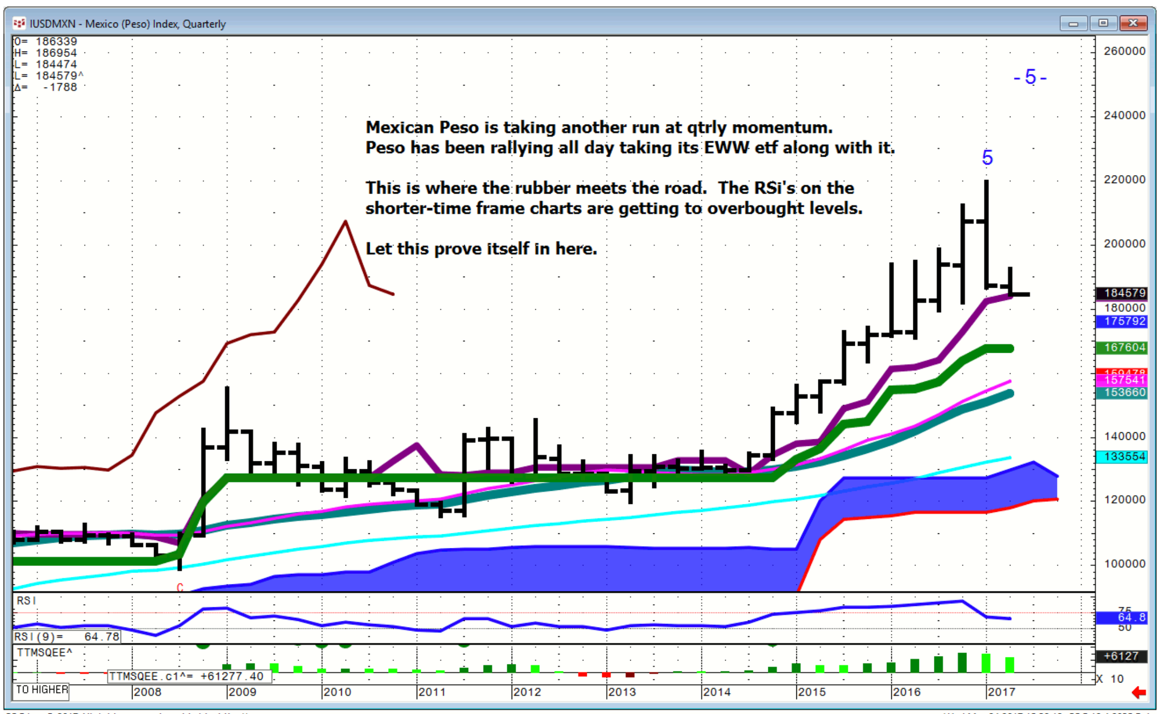
USD/MXN



IUSDMXN - Mexico (Peso) Index, Quarterly
Mexican Peso is taking another run at qtrly momentum.
Peso has been rallying all day taking its EWW etf along with it.
This is where the rubber meets the road. The RSi's on the shorter-time frame charts are getting to overbought levels.
Let this prove itself in here.

Commodities

General Comments or **Valuable Insight**

Rule #1..Never chase Wednesday's closing strength in a Bull. It's very rare you'll miss anything.

Longer-Time Frame Point & Figure in the Nasd 100 & Spu's show double top potential, with the Nasd/Bonds into a gap.

Price rejection from these levels is the only hope for the plungers.

USD/MXN has been a Risk On indicator since January Dollar Highs.

Clearly there are those that are buying Bonds & Gold for a safety trade.

The question remains whether or not this translates into Risk off.

The game is afoot.
