General Comments or **Valuable Insight**

Spu’s are moving 20 points at a time.

VIX reaction is utterly bizarre. It should’ve imploded.

You’d think Bonds would catch a bid once in a while. They don’t.

Correlations should be ignored. The croupier is at the table, just step up to the table and bet on red or black.

Tough to be a long-term guy when you’re getting such big Equity Index intra day moves.

I’ll await the New York session tomorrow.

Chart Lines....Ichimoku

Green Bright...200 DMA **Aqua** 50 DMA **Blue Green** 21 DMA **Fuchsia** 18 DMA

These are simple moving averages. When you roll a chart to weekly or monthly the averages are simple weekly or monthly mvg averages.

The **reddish purple** is an embedded Imoku line which acts as momentum.

The **leaf green** is an embedded Imoku line which calculates 50% retraces.

Brown line is where the Macd with histogram crosses. The line shows the visual on every time frame so you don’t have to guess looking at the price of the cross in a line study.
