Amazon retested its last acceleration ORH # @ 1465.80.
It would take sustained price action under that low for further weakness

General Comments or **Valuable Insight**

DJI below 24,650 is in trouble.

Spu/Bond shows the possibility of a bounce given today's low matched a 50% retrace for the past 5 weeks.

In short, today has to be the end of the selling or I will be going Neutral all risk spreads.

Taking out today's lows tomorrow will lead to a very rough end to the week.

China's market response tonight will set the tone for tomorrow.

Wall street types are still looking for the 200 DMA retest in the Spy @ 255.75.

A close below 265 would move me into that camp.

These are simple moving averages. When you roll a chart to weekly or monthly the averages are simple weekly or monthly mvg averages.

The **reddish purple** is an embedded Imoku line which acts as momentum.

The **leaf green** is an embedded Imoku line which calculates 50% retraces.

Brown line is where the Macd with histogram crosses. The line shows the visual on every time frame so you don’t have to guess looking at the price of the cross in a line study.
