General Comments or Valuable Insight

Ranges are getting smaller in the Spu's, back to 20 points today, which put most of us to sleep.

Earnings is setting up to be a much better name game than an Index trade.

Oil sold off last night, but that was to be expected, as Vlad raises cash by selling crude.

Soybeans...I gave it as much as I was willing to give back. That was 40-50 cents depending on your entry.

The original note was released during the Globex session early A.M. CDT pre U.S. 4/4/18.

As we go into spring plantings I think you'll see some back and fill.

May contract grains expire 5/14/18.

I'll be vigilant for another set up late spring.

Thank you Peter, an RIA that's paying attention to the game, steered my vision to two high yielding MLP's after getting the Williams & Company pattern alert.

Chart Lines....Ichimoku

Green Bright...200 DMA **Aqua** 50 DMA **Blue Green** 21 DMA **Fuchsia** 18 DMA **Yellow** 10 SMA

These are simple moving averages. When you roll a chart to weekly or monthly the averages are simple weekly or monthly mvg averages.

The **reddish purple** is an embedded Imoku line which acts as momentum.

The **leaf green** is an embedded Imoku line which calculates 50% retraces.

Brown line is where the Macd with histogram crosses. The line shows the visual on every time frame so you don't have to guess looking at the price of the cross in a line study.
