General Comments or Valuable Insight

I fielded as many Bullish queries today as Bearish ranging from Energy names to the Indices.

Nasd 100 was showing ORL with an hour to go before short covering put the Index in a neutral stance.

The One energy name that completely blew up was Petrobas "PBR".

It's still up 10% on the year after collapsing 60+% since Oil topped eight days ago.

I'll take a look tomorrow for bottoming action. Inventory #'s don't come out until Thursday due to the holiday.

These are simple moving averages. When you roll a chart to weekly or monthly the averages are simple weekly or monthly mvg averages.

The **reddish purple** is an embedded Imoku line which acts as momentum.

The **leaf green** is an embedded Imoku line which calculates 50% retraces.

Brown line is where the Macd with histogram crosses. The line shows the visual on every time frame so you don't have to guess looking at the price of the cross in a line study.
