Tomorrow will tell what follows through and what fails.**

PRGO, REGN, CERN, ACAD are a few other names to peruse.

50X3 has been up for 130 + points without a pressure relief reversal.

These are simple moving averages. When you roll a chart to weekly or monthly the averages are simple weekly or monthly mvg averages.

The **reddish purple** is an embedded Imoku line which acts as momentum.

The **leaf green** is an embedded Imoku line which calculates 50% retraces.

Brown line is where the Macd with histogram crosses. The line shows the visual on every time frame so you don't have to guess looking at the price of the cross in a line study.
